

 Detailed Report of Errors & Fixes 

Overview

This document  captures all  errors encountered while working on the  Gradio-based Book Recommender project on  February 3, 2025, starting from  2 PM. Each  error is documented with its  cause,  diagnosis, and  resolution.

Homebrew Not Found Error

 Error:

brew: command not found 

 Cause:

Homebrew was  not installed or  not configured in the system PATH.

 Fix:

 Installed Homebrew :

```
/bin/bash -c "$(curl -fsSL  
https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

 Added Homebrew to PATH :

```
echo 'eval "$(/opt/homebrew/bin/brew shellenv)"' >> ~/.zprofile
```

```
eval "$(/opt/homebrew/bin/brew shellenv)"
```

 Verified installation :

```
brew --version
```

2 🔑 OpenSSL Library Not Found

✗ Error:

Library not loaded: /opt/homebrew/opt/openssl@3/lib/libssl.3.dylib 🔍🚫

⚠ Cause:

The system was 🛑 missing OpenSSL or it was ✗ not linked properly.

🔧 Fix:

1 Installed OpenSSL 🔑:

```
brew install openssl@3
```

2 Configured OpenSSL paths 🗺:

```
echo 'export PATH="/opt/homebrew/opt/openssl@3/bin:$PATH"' >> ~/.zshrc
```

```
echo 'export LDFLAGS="-L/opt/homebrew/opt/openssl@3/lib"' >> ~/.zshrc
```

```
echo 'export CPPFLAGS="-I/opt/homebrew/opt/openssl@3/include"' >> ~/.zshrc
```

```
source ~/.zshrc
```

3 Verified OpenSSL installation ✅:

```
openssl version
```

3 📁 Pandas CSV Parsing Error

✗ Error:

ValueError: Unterminated quoted field at end of CSV line. ❌

⚠️ Cause:

The CSV file 📁 had improperly formatted text 📝 with unclosed quotes ❌.

🔧 Fix:

1️⃣ Opened the CSV file 📝 in a text editor ✎ 2️⃣ Removed unclosed quotes ❌ and fixed the affected rows 🔧 3️⃣ Reloaded the CSV 📁 using:

```
books = pd.read_csv("books_with_emotions.csv", on_bad_lines="skip")
```

4️⃣ ❌ Bad Delimiter in `to_csv()`

❌ Error:

ValueError: bad delimiter value ❌

🔧 Fix:

Replaced `to_csv()` with a manual write operation 📝:

with `open("tagged_description.txt", "w", encoding="utf-8")` as `f`:

```
f.write("\n".join(books["tagged_description"].dropna().astype(str).tolist()))
```

5️⃣ 🔬 TensorFlow Not Found & Compatibility Issues

❌ Error:

RuntimeError: At least one of TensorFlow 2.0 or PyTorch should be installed. ❌

 **Fix:**

1) Installed TensorFlow .

```
pip install tensorflow==2.17 keras==2.17 transformers==4.45.0
```

2) Verified installation .

```
python -c "import tensorflow as tf; print(tf.__version__)"
```

6 TensorFlow MPS Backend Error

 **Error:**

KeyError: ('', '/device:GPU:mps') 

 **Fix:**

Forced TensorFlow  to use CPU .

```
import tensorflow as tf
```

```
import os
```

```
os.environ["CUDA_VISIBLE_DEVICES"] = "-1"
```

```
os.environ["TF_ENABLE_MLIR"] = "0"
```

```
tf.config.set_visible_devices([], 'GPU')
```

7 Gradio Button Click Error

✖ Error:

ValueError: All arrays must be of the same length 🚫

⚠ Cause:

The lists being used for creating a Pandas DataFrame had different lengths.

🔧 Fix:

Ensured both lists were of equal length before creating the DataFrame:

```
min_length = min(len(isbns), len(prediction_cat))
```

```
isbns = isbns[:min_length]
```

```
prediction_cat = prediction_cat[:min_length]
```

```
missing_predicted_df = pd.DataFrame({"isbn13": isbns, "predict_categories":  
prediction_cat})
```

🏠 END Final Summary 📜

🛑 Error

⚠ Cause

🔧 Solution

Homebrew Not Found

Not installed or 🗺 PATH missing

Installed & configured PATH

OpenSSL Library Missing

Not installed or 🔗 not linked

Installed & configured

CSV Parsing Error

Improper formatting

Cleaned CSV manually

❌ `to_csv()` Delimiter

🚫 Pandas issue

✅ Used `write()` instead

🔬 TensorFlow Not Found

⚠️ Incompatible installation

✅ Installed correct version

💻 MPS Backend Error

⚠️ TensorFlow GPU issue

✅ Forced CPU execution

📊 Sorting Error

🔢 Mixed data types

✅ Converted to strings

🔢 ISBN Parsing Error

❌ Contains non-numeric characters

✅ Removed invalid characters

🔘 Gradio Button Click Error

📏 Mismatched list lengths

✅ Adjusted list lengths

🔒 Google Colab Repo

🛑 Private repo

✅ Changed to public

🚀 Outcome:

- ✅ Fixed all errors 🛠️.
- ✅ Gradio-based 📖 Semantic Book Recommender is now fully functional 🎯.
- ✅ All fixes documented for future 🔍 reference.

🎉 End of Report 📄✨
